Adobe® CQ 6®
AEM: Multi Site Manager
Duration: 2 Days | 16 Hrs

Course Description:

Managing multiple sites within the same AEM instance gives authors the opportunity to reuse content across channels, languages and national sections.However, different levels of complexity have to be taken into account: the ability to inherit changes from the content master to the copies; the ability to unlock content in one of the copies and start a different version of the same content; and the ability to use the same piece of content within different layouts.

AEM Multi Site Manager allows the management of all these levels of complexity and provides a set of features to support authors managing a large number of sites.

Target audience:

This training will review the most important topics regarding Multi Site Management, providing both an author and a developer perspective of the tasks that need to be mastered in order to successfully support multinational, multi-language and multi-channel scenarios.

Objectives:

This training will review the key topics of Multi Site Management. Participants who complete this course will:

• Understand Live Copies
• Know how to use the Site Wizard
