

# Adobe® CQ 5®

## AEM: Security

Duration: 1 Day | 8 Hrs

Know Tomorrow Today

### Course Description:

In this training, participants will learn about possible attacks against AEM installations and protection against them. After completing the training, the participants will be able to configure CQ5 and dispatcher in a secured way. The training also demonstrates the considerations to be made while implementing the codes for CQ5. This training covers security related AEM features, security considerations in code, XSS attacks, securing the AEM environment, and User generated content.

### Target audience:

This training is useful for developers who use AEM to manage websites, and want to secure them from attacks and data thefts.

### Objectives:

Upon completing this training, participants will be able to:

- Identify the default security related features in CQ
- Identify Security considerations in code
- Describe cross site scripting (XSS)
- Secure the CQ environment
- Generate secure content

### Pre-Requisites:

Participants should have attended the AEM Developer OR AEM Advanced Developer classes.

### 🕒 Agenda: Day 1

#### Morning Session (9 a.m. - noon)

- Introduction
- Security Related CQ Features
- Security considerations in code

#### Afternoon Session (1-5 p.m.)

- User generated content
- Cross site scripting(XSS)
- Securing the CQ environment
