AEM: Mobile

Course Duration 1 Day

Description

Mobile channels have gained considerable importance in the last few years, mainly driven by the success of the iPhone. This training will instruct students on how to build a mobile website with AEM, including mobile development best practices and specific AEM techniques to allow content reuse and optimization through the different devices.

Pre-requisites

The content of this training assumes a basic knowledge of Adobe AEM as a general Web application platform, as well as familiarity with AEM user interfaces. Students should have attended the AEM Developer class.

Course Outline

- Introduction
- CQ5 mobile website
- Emulation and editing
- Device detection using device specs
- Device groups
- Specialized mobile components
- Content reuse and inheritance
- Mobile authoring with iPad
- Newsletter templates

Course Objectives

Upon completing this training, participants will be able to:

- Understand key concepts regarding the use of mobile sites and mobile native apps
- Set up a simple mobile website project
- Be able to use the emulator
- Understand device detection
- Develop components for mobile
- Understand content reuse across channels

Who can attend this?

This training is useful for those developers who are required to use AEM to manage websites for mobiles devices, view a mobile page that emulates a mobile device, or switch between several views.
